1. ASP stands for?

- A) Access Server Pages
- B) Active Server Pages
- C) Active Server Platform
- D) Active Server Programming

Correct Answer : **Active Server Pages**

Explanation : ASP stands for Active Server Pages

 Show Answer

2 . Classic ASP pages have the file extension?

- A) .cs
- B) .net
- C) .asp
- D) .aspx

Correct Answer : **.asp**

Explanation : Classic ASP pages have the file extension .asp and are normally written in VBScript.

 Show Answer

3 . Which of these data source controls do not implement Caching?

- A) LinqDataSource
- B) SqlDataSource
- C) XmlDataSource
- D) ObjectDataSource

Correct Answer : **LinqDataSource**

 Show Answer

4 . The file extension an ASP.NET web form is__

- A) .asap
- B) .aspx
- C) .asps
- D) None of the above

Correct Answer : **.aspx**

 Show Answer

5 . ASP (aka Classic ASP) was introduced in?

- A) 1995
- B) 1996
- C) 1997
- D) 1998

Correct Answer : **1998**

Explanation : ASP (aka Classic ASP) was introduced in **1998** as Microsoft's first server side scripting language.

 Show Answer

6 . Which of the following ASP.NET statement is true

- A) ASP.NET Web Forms is not a part of the new ASP.NET Core.
- B) ASP.NET Web Forms is an event driven application model.
- C) ASP.NET MVC is an MVC application model (Model-View-Controller)
- D) All of the Above

Correct Answer : **All of the Above**

 Show Answer

7 . Default Session data is stored in ASP.Net.

- A) InProcess
- B) StateServer
- C) Session Object
- D) All of the Above

Correct Answer : **InProcess**

 Show Answer

8 . Which control defaults to displaying the files in the current directory?

- A) List Box
- B) Dir List Box
- C) File List Box
- D) Drive List Box

Correct Answer : **File List Box**

 Show Answer

9 . _____ debugging tools come with the .NET SDK.

- A) Dbg CLR – graphic debugger
- B) CorDBG – command-line debugger
- C) Both (A) and (B)
- D) None of the Above

Correct Answer : **Both (A) and (B)**

 Show Answer

10 . Attribute must be set on a validator control for the

- A) Validate
- B) ControlToBind
- C) ValidateControl
- D) ControlToValidate

Correct Answer : **ControlToValidate**

Explanation : Attribute must be set on a validator control for the validation to work ControlToValidate.

 Show Answer

11 . What class does the ASP.NET Web Form class inherit from by default?

- A) System.Web.Form
- B) System.Web.UI.Form
- C) System.Web.UI.Page
- D) System.Web.GUI.Page

Correct Answer : **System.Web.UI.Form**

Explanation : **System.Web.UI.Form** class the **ASP.NET** Web Form class inherit from by default.

 Show Answer

12 . Which of the function is used to check textbox only contain number?

- A) char.IsDigit
- B) char.IsNumber
- C) char.IsLetter
- D) char.IsLetterOrDigit

Correct Answer : **char.IsDigit**

 Show Answer

13 . What are the Activation modes for .NET Remoting?

- A) Singleton
- B) Singlecall
- C) Both (A) and (B)
- D) None of the Above

Correct Answer : **Both (A) and (B)**

 Show Answer

14 . ASP.NET is?

- A) client side technologies
- B) server side technologies

- C) Both (A) and (B)
- D) None of the Above

Correct Answer : **Both (A) and (B)**

 Show Answer

15 . Which of the following events will fire when the Insert key is pressed?

- A) KeyUp
- B) KeyDown
- C) KeyPress
- D) KeyDown,KeyPress

Correct Answer : **KeyDown,KeyPress**

 Show Answer

16 . What is the last stage of the Web forms lifecycle?

- A) Validate
- B) Page_Unload
- C) Page_Load
- D) Event Handling

Correct Answer : **Page_Unload**

 Show Answer

17 . How will you specifying the Cache Location?

- A) You can use browser settings to specify where a page is cached.
- B) You can use the Location attribute in QueryString to specify where
- C) You can use the Location attribute of the <%@ OutputCache %> c
- D) None of the Above.

Correct Answer : **You can use the Location attribute of the <%@ OutputCache %> directive to specify where the page is cached.**

Explanation :

By default, when you use Page Output Caching, a page is cached in three locations : web server, any proxy servers, and browser. You can write following code to cache the page on server for 50 seconds.

```
<%@ OutputCache Duration="50" VaryByParam="none" Location="Server" %>
```

 Show Answer

18 . In which file you should write the connection string, so you can access it in all the web page for same application?

- A) In Web.config file.
- B) In MasterPage file.
- C) In App_Data folder.
- D) None of the Above.

Correct Answer : In Web.config file.

Explanation :

Following are the steps to create the connection string in Web.config file and access it in code behind file. In connection string data source and database name you have to provide according to your sqlserver instance and their database name.

Step 1 : Create the connection string in Web.config file as follows.

```
< connectionStrings>
< add name="con" connectionString="Data Source =ServerName; initial catalog= DataBaseName; Integrated Security=true;" />
```

Step 2 : In code behind file write the following code.

ConfigurationManager class is available in System.Configuration namespace;

```
string conStr= ConfigurationManager.ConnectionStrings["con"].ConnectionString;
SqlConnection conObj = new SqlConnection(conStr);
conObj.Open();

// Write code according to the requirement.

conObj.Close();
```

 Show Answer

19 . What is the name of the Page object's property when a page is being requested without data being submitted?

- A) IsPostBack
- B) IsValid
- C) IsCallback
- D) IsReusable

Show Answer

20 .

_____ is the DataType return in IsPostBack property.

- A) int
- B) bit
- C) object
- D) boolean

Correct Answer : boolean

Show Answer

21 . Application_Start event is available in _____ .

- A) Local.asax
- B) Web.config
- C) Global.asax
- D) None of the Above

Correct Answer : Global.asax

Show Answer

22 . In ASP.NET application DLL files are stored in ___ folder.

- A) Bin
- B) App_Code
- C) App_Data
- D) App_LocalResources

Correct Answer : Bin

Show Answer

23 . Which of the following method is used to dynamic code?

- A) RegisterScript
- B) Page.ClientScript
- C) Page.ClientScript.RegisterClientScriptBlock
- D) None of the Above

Correct Answer : `Page.ClientScript.RegisterClientScriptBlock`

 Show Answer

24 . Which of the following Session Mode Serialization is not required to store the data?

- A) SQLServer
- B) InProc
- C) StateServer
- D) None of the Above

Correct Answer : `InProc`

 Show Answer

25 . Which is the first event of ASP.NET page, when user requests a web page?

- A) Init
- B) Load
- C) PreLoad
- D) Preinit

Correct Answer : `Preinit`

Explanation :

- 1) **PreInit** : This event is also useful when you are dynamically (from code) set values such as master page, theme or dynamically created controls for a page.
- 2) **Init** : This event fires after each control has been initialized.
- 3) **InitComplete** : This event fires all initializations of the page and its controls have been completed.
- 4) **PreLoad** : Executes before view state has been loaded for the page processing.
- 5) **Load** : This event checks for PostBack and then sets control properties.
- 6) **Control (PostBack) event(s)** : This event fires when any events on the PostBack to occur. For example button's click event.
- 7) **LoadComplete** : At this point all controls are loaded.
- 8) **PreRender** : This event fires after all regular PostBack event have taken place. It is executed before saving ViewState.
- 9) **SaveStateComplete** : If anyone makes changes to the page's controls at this point or beyond, they are

ignored.

10) **Render** : This event generates the client-side HTML, DHTML, and script that are necessary to display a control at the browser.

11) **UnLoad** : This event is used for cleanup code.

◇ Show Answer

26 . What happens in the Init event of a page?

- A) HTML is rendered.
- B) ViewState is loaded on the page.
- C) Each child control of the page is initialized to its design time values.
- D) None of the Above.

Correct Answer : Each child control of the page is initialized to its design time values.

◇ Show Answer

27 . If we want to add graphics using asp.net which of the following web control will you use?

- A) AdRotator
- B) Layout
- C) Grid View
- D) Link Button

Correct Answer : AdRotator

Explanation : The **AdRotator** web server control cycles through a series of clickable ad banner and allows some ads to be weighted more heavily.

◇ Show Answer

28 . What are the types of cookies?

- A) Session cookies
- B) Dummy cookies.
- C) Persistent cookies.
- D) Both (A) and (C)

Correct Answer : Both (A) and (C)

 Show Answer

29 .

You use the ASP.NET Web Site Administration Tool to configure ASP.NET membership with forms authentication. What should you name your log so that you do not have to modify the Web.config file?

- A) Auth.aspx
- B) Login.aspx
- C) Default.aspx
- D) LoginPage.aspx

Correct Answer : Login.aspx

Explanation : If no filename is specified in the Web.config file, ASP.NET redirects unauthenticated users to the Login.aspx page, regardless of whether the page exists.

 Show Answer

30 . How many types of authentication ASP.NET supports?

- A) Windows Authentication.
- B) Forms Authentication.
- C) .NET Passport Authentication.
- D) All of the Above.

Correct Answer : All of the Above.

Explanation :

Windows authentication : It is enabled by default. When Windows authentication is enabled, users are identified by their Microsoft Windows account names.

Forms authentication : In this authentication users are typically identified by a cookie. When a user is authenticated, an encrypted cookie is added to the user's browser. As user is identified by the cookie.

.NET Passport authentication : It is a centralized service provided by Microsoft. It allows users to create a single sign-in name and password to access any site that is using .NET Passport.

Passport authentication : .NET Passport does only authentication not session management. It identifies the user to the participating site who the user is. MSN and Hotmail uses .NET Passport.

 Show Answer

31 . Which of the following statements about referencing master page methods and properties is true?

- A) Content pages can reference controls in the master page.
- B) Content pages can reference public methods in the master page.
- C) Content pages can reference public properties in the master page.
- D) All of the Above.

Correct Answer : All of the Above.

 Show Answer

32 . How does ASP.NET store SessionIDs by default?

- A) In cache
- B) In a global variable
- C) In cookies
- D) In URL strings or in a database

Correct Answer : In cookies

 Show Answer

33 . What is default time of expire session in ASP.NET?

- A) 20 minute
- B) 30 minute
- C) 40 minute
- D) 60 minute

Correct Answer : 20 minute

 Show Answer

34 . Which method do you invoke on the Data Adapter to generate dataset?

- A) Read()
- B) Fill()
- C) ExecuteQuery()
- D) None of the Above

Correct Answer : Fill()

 Show Answer

35 . Which data control does not exist in asp.net?

- A) Repeater
- B) DataList
- C) GridView
- D) tableView

Correct Answer : tableView

 Show Answer

36 . Which control is used to sort the data and allow paging?

- A) DataGrid
- B) Datalist
- C) Repeater Control
- D) None of the Above

Correct Answer : DataGrid

 Show Answer

37 . Which namespace is used when we connect our asp.net page to sql server?

- A) System.url
- B) System.sqlserver
- C) System.data.sqlclient
- D) System.data.sql

Correct Answer : System.data.sqlclient

 Show Answer

38 . Which of the following is not supported for IIS?

- A) Windows XP Home
- B) Windows XP Professional
- C) Windows 2000 Server
- D) Windows 2003 Server

Correct Answer : Windows XP Home

 Show Answer

39 . What is a web application running on multiple servers called?

- A) HTTP
- B) Web farm
- C) Web Page
- D) Web Servers

Correct Answer : **Web farm**

Explanation : When we host a web application over multiple web servers to distribute the load among them it is known as a **web farm**

 Show Answer

40 . What property do you modify on a server control to minimize the size of the ViewState data?

- A) ViewState="true"
- B) Set EnableViewState to true.
- C) Set EnableViewState to false.
- D) None of the Above

Correct Answer : **Set EnableViewState to false.**

Explanation : In ASP.NET when a form is postback to server it reappears in the browser with all form values. ASP.NET page and controls maintain their state by in hidden form field named _ViewState. By default it is enable for all server controls and sometimes create problem because unnecessary data are stored in this field. To minimize the size of the ViewState data, set EnableViewState to false.

 Show Answer

41 . There is a button on page name cancel and it shows cancel button is clicked. What will you do?

- A) set cancel=true
- B) set RemoveValidation=true
- C) set CausesValidation = false.
- D) None of the Above.

Correct Answer : **set CausesValidation = false.**

 Show Answer

42 . A web page has lots of input data, and you want the data input to be spread across multiple screens. What is the best control to use to implement this solution on a single Web page?

- A) Wizard
- B) Panel
- C) ImageMap
- D) None of the Above

Correct Answer : **Wizard**

Explanation : The **Wizard** control is used to divide a large form, which has the lots of data, into multiple sub-forms. The Wizard control contains one or more WizardStep child controls. Only one **WizardStep** is displayed at a time.

 Show Answer

43 . How can we create a FileSystemObject in Asp.net?

- A) Create("FileSystemObject")
- B) Server.CreateObject("FileSystemObject")
- C) Create Object:"Scripting.FileSystemObject"
- D) Server.CreateObject("Scripting.FileSystemObject")

Correct Answer : **Server.CreateObject("Scripting.FileSystemObject")**

 Show Answer

44 . Is ASP.NET Web form part of ASP.NET core?

- A) Yes
- B) No
- C) None of the Above
- D) --

Correct Answer : **Yes**

 Show Answer

45 . Which of the following technologies are also used in ASP.NET?

- A) CSS
- B) AJAX
- C) JavaScript

- D) All of the Above

Correct Answer : All of the Above

Explanation : We can use CSS, JavaScript, and AJAX with ASP.NET for web application development.

◊ Show Answer

46 . What is the correct use of the web.config file?

- A) To configure to domain client
- B) To configure the domain server
- C) Store information about web browser
- D) To store global information and variable definitions

Correct Answer : To store global information and variable definitions

◊ Show Answer

47 . What's the difference between Response.Write() and Response.Output.Write()?

- A) Write data to a file
- B) Write Formatted Output
- C) Both (A) and (B)
- D) None of the Above

Correct Answer : Write Formatted Output

◊ Show Answer

48 . What methods are fired during the page load?

- A) Load()
- B) Unload()
- C) PreRender()
- D) All of the Above

Correct Answer : PreRender()

◊ Show Answer

49 . What is the full form of WSDL?

- A) Web Services Designing Language

- B)** Windows Services Designing Language
- C)** Web Services Description Language
- D)** None of the Above

Correct Answer : **Web Services Description Language**

 Show Answer

50 . A process where items are removed from cache in order to free the memory based on their priority?

- A)** CachePriority
- B)** CacheItemPriority
- C)** CacheElementPriority
- D)** None of the Above

Correct Answer : **CachePriority**

 Show Answer

51 . Which of the following is a valid skin code inside a skin file?

- A)** < asp:TextBox BackColor="Yellow" BorderStyle="Dotted" Runat="Server" />
- B)** < asp:TextBox BackColor="Yellow" BorderStyle="Dotted" ID="colorTxt" />
- C)** < asp:TextBox BackColor="Yellow" BorderStyle="Dotted" ID="colorTxt" Runat="Server" />
- D)** None of the Above.

Correct Answer : < asp:TextBox BackColor="Yellow" BorderStyle="Dotted" Runat="Server" />

 Show Answer

52 . Windows-Based Authentication is well suited for.

- A)** Public web site.
- B)** Desktop application.
- C)** Intranet environment.
- D)** None of the Above.

Correct Answer : **Intranet environment.**

Explanation :

In a Windows-based authentication, the requests go directly to IIS to provide the authentication process. This type of authentication is quite useful in an **intranet environment**, where the server handles authentication process.

◊ Show Answer

53 . Which of the following statement is correct about HyperLink control in ASP.NET?

- A) It cannot be used to refer to a webpage on the server
- B) ASP.NET does not support HyperLink control.
- C) The hyperLink is also known as LinkButton in ASP.NET
- D) It is an ASP.NET control, that responds to a click event.

Correct Answer : **It is an ASP.NET control, that responds to a click event.**

◊ Show Answer

54 . Which of the following property is used to get cookies value in ASP.NET?

- A) Response.Cookies["cookiename"].Value
- B) Response.Cookies["cookiename"].GetValue
- C) Response.Cookies["cookiename"].CookieValue
- D) Response.Cookies["cookiename"].GetCookieValue

Correct Answer : **Response.Cookies["cookiename"].Value**

◊ Show Answer

55 . Which term is used for pages that depend on the Master page?

- A) Web Pages
- B) Content Pages
- C) Master Pages
- D) None of the Above

Correct Answer : **Content Pages**

◊ Show Answer

56 . Which of the following is not an ASP.NET event?

- A) Load
- B) Init
- C) Import

D) All of the Above

Correct Answer : Import

◊ Show Answer

57 . If any user has disabled cookies in their browsers, what can you do to enable them to use forms authentication?

- A) Set cookieless=true;
- B) Set BoweserCookieEnabled=true;
- C) Use the AutoDetect setting of the cookieless attribute.
- D) None of the Above.

Correct Answer : Use the AutoDetect setting of the cookieless attribute.

◊ Show Answer

58 . To kill a users session explicitly which of the following will you use?

- A) Session.End()
- B) Session.Close()
- C) Session.Discard()
- D) Session.Abondon()

Correct Answer : Session.Abondon()

Explanation : The Abandon method destroys all the objects stored in a session object and releases their resources. If we don't call this explicitly the server destroys this object when the session times out.

◊ Show Answer

59 . How many types of Cache Dependencies are available?

- A) Key-based dependencies
- B) Time-based dependencies
- C) File based dependencies
- D) All of the Above

Correct Answer : All of the Above

◊ Show Answer

60 . Which ado.net class provide disconnected environment?

- A) DataSet
- B) Command
- C) DataReader
- D) None of the Above.

Correct Answer : **DataSet**

 Show Answer

61 . Which control is required of every AJAX page to manage the JavaScript files sent to the client and the communication between client and server?

- A) UpdatePanel
- B) ScriptManager
- C) AsyncPostBackTrigger
- D) None of the Above.

Correct Answer : **ScriptManager**

Explanation :

ScriptManager control is mandatory control if you want to work with ASP.NET AJAX server control. Only one instance of a ScriptManager can be added to the web page. It manages the JavaScript files sent to the client and the communication between the server and the client. It also manages partial-page updates. The HTML for a ScriptManager control in Source view looks as follows:

```
< asp:UpdatePanel ID="UpdatePanel1" runat="server">
```

 Show Answer

62 . Which of the following method is used to store a **HttpCookie** in **ASP.NET**?

- A) Response.Cookies.SaveCookie()
- B) Response.Cookies.AddCookie()
- C) Response.Cookies.Add()
- D) Response.Cookies.AddCookies()

Correct Answer : **Response.Cookies.Add()**

 Show Answer

63 . Which of the following property is used to set the cookie's expiration date and time in ASP.NET?

- A) Response.Cookies ["mycookie"].Expires
- B) Response.Cookies ["mycookie"].ExpiresTime
- C) Response.Cookies ["mycookie"].RemoveDateTime
- D) Response.Cookies ["mycookie"].ExpiresDateTime

Correct Answer : **Response.Cookies ["mycookie"].Expires**

 Show Answer

64 . Cookies are stored in?

- A) Cache Memory
- B) Main Memory
- C) Hard Drive
- D) CPU Registers

Correct Answer : **Hard Drive**

 Show Answer

65 . Cookies can store data up to?

- A) 4 KB
- B) 10 KB
- C) 100 KB
- D) 1024 KB

Correct Answer : **4 KB**

 Show Answer

66 . In order to prevent a browser from caching a page, what should be written?

- A) Response.Cache.SetNoCaching();
- B) Response.Cache.SetNoStore();
- C) Response.Cache.SetNoServerCaching();
- D) None of the Above

Correct Answer : Response.Cache.SetNoStore();

◇ Show Answer

67 . What are the Command Object Methods?

- A) ExecuteReader
- B) ExecuteScalar
- C) ExecuteNonQuery
- D) All of the Above.

Correct Answer : All of the Above.

Explanation :

- * **ExecuteReader** : This method works on select SQL query. It returns the DataReader object. Use DataReader read () method to retrieve the rows.
- * **ExecuteScalar** : This method returns single value. Its return type is Object. If you call ExecuteScalar method with a SQL statement that returns rows of data, the query executes but returns only the first column of the first row returned by the query.
- * **ExecuteNonQuery** : If you are using Insert, Update or Delete SQL statement then use this method. Its return type is Integer (The number of affected records).
